Rotaract Club of Xiamen University Malaysia | Rotary Club of Kuala Lumpur Dynamics | Rotary Club of Tun Razak Exchange

SDC Hackathon

Technical Tools Declaration

Hosted by Xiamen University Malaysia (XMUM) AI Club

Submission Deadline: 25 October 2026

Instructions: Declare every API, cloud service, AI tool, dataset, model, and sponsor resource your team used to build the project. Complete every section; where a category does not apply, tick "No" or write "None" – do not leave it blank. Submit as a single PDF document named "SDC2026_TeamName_TechDeclaration.pdf" together with your project submission. Undeclared third-party resources discovered at judging may affect your score or eligibility.

SDC HACKATHON 2026

Technical & Tools Declaration

Hosted by Xiamen University Malaysia (XMUM) AI Club

Submission Deadline: [Insert date]

Instructions: Declare every API, cloud service, AI tool, dataset, model, and sponsor resource your team used to build the project. Complete every section; where a category does not apply, tick "No" or write "None" – do not leave it blank. Submit as a single PDF document named "SDC2026_TeamName_TechDeclaration.pdf" together with your project submission. Undeclared third-party resources discovered at judging may affect your score or eligibility.

1. Team & Project Overview

Team Name	NullTeam
Project / Solution Name	jAIX (Job Artificial Intelligence Expert)
Name (Leader)	Muhammad Haqim bin Mohd Nazry
Email & Phone (Leader)	haqimnazry@gmail.com & +60 16-240 4652
University Affiliation(s)	Universiti Malaya
Live Prototype URL	https://jAIX-Job-Artificial-Intelligence-Expert.replit.app
Code Repository URL (public / access granted to judges)	https://github.com/q1ms/SDC2026_NullTeam_Domain1

2. Architecture & Technology Stack

2.1 System Architecture Overview

Describe how the components declared in this document connect end-to-end (e.g., user interface → backend → AI model/API → database → cloud hosting). Attach a system block diagram as an appendix if available.

[Maximum 200 words]

The React/Vite app calls a TypeScript/Express API. Profiles and pathways are stored in file-backed SQLite. For CV import, PDF.js or Mammoth extracts text in the browser; that text is sent to the API and RunPod's Qwen/Qwen2.5-7B-Instruct endpoint for parsing, then returned for user review. Profile saves and career matching use the API and deterministic rules. The radar fetches Google News RSS; Unsplash images are fallbacks. Published-app restarts can erase the SQLite data.

2.2 Languages, Frameworks & Libraries

List the main programming languages, frameworks, and third-party libraries that your team did not create. Open-source use is permitted provided it is declared and properly licensed/attributed.

Name & Version	Purpose in Project	License
TypeScript / Express	API routing and backend logic	MIT
React / Vite	Frontend UI framework and build tooling	MIT.
SQLite	File-backed database	Public Domain.
PDF.js / Mammoth	In-browser résumé text extraction	Apache 2.0 / MIT
Tailwind CSS	UI styling	MIT

3. APIs & Cloud Services

3.1 External APIs

List every external API your solution calls (GenAI, maps, payments, messaging, data feeds, etc.). Do not include API keys or secrets in this document.

API & Provider	Purpose in Project	Access Tier (free / paid / sponsor-provided)
Google News RSS	Live AI trend signal layer data feed	Free tier
Unsplash CDN	Fallback placeholder images for news feed	Free tier

3.2 Cloud Platforms & Deployment

List every cloud service used for hosting, storage, databases, authentication, or compute, and indicate how the prototype is deployed.

Service & Provider	Purpose in Project	Plan / Region
Replit	Full-stack application hosting and file-backed SQLite database	Sponsor-provided (Promo Code)
RunPod	Serverless GPU compute for ML inference endpoint	Sponsor-provided (Voucher)

4. AI Tools, Models & Datasets

4.1 AI Models Used in the Solution

List every AI model embedded in or called by your application, including pre-trained, fine-tuned, and self-trained models.

Model & Version	Source / Provider	Usage (pre-trained / fine-tuned / self-trained)	License / Terms
Qwen/Qwen2.5-7B-Instruct	Alibaba Cloud / HuggingFace	Pre-trained inference	Apache 2.0

4.2 Datasets

List all datasets used for training, fine-tuning, evaluation, or in the running application. State clearly if a dataset contains personal or sensitive data.

Dataset Name	Source / URL	Type (public / private / self-collected / synthetic)	License	Personal Data? (Y/N)
Google News RSS Feed	https://news.google.com	Public	Standard terms	No.

4.3 AI-Assisted Development Tools

Tools used to help write code, design, content, or documentation (e.g., chat assistants, code completion tools, image generators). Declaring these tools does not reduce your score; undeclared use may.

Did your team use any generative-AI tool to help create code, design, text, or other project material?

☑ Yes ☐ No

If yes, list them below:

Tool & Version	**Used For**	**Extent of Use (minor / moderate / major)**
Replit Agent (core model)	Full-stack codebase generation, UI refactoring, and deployment	Major.
Gemini (Gemini 1.5 Flash)	Used for debugging and searching ideas for UI/UX	Moderate.

Briefly describe how your team reviewed, tested, and took responsibility for AI-generated output:

[Maximum 100 words]

Automated and manual testing was conducted on the API to confirm the RunPod endpoint extracted resume text into strict JSON. We manually verified that profile saves and career matching executed accurately via our deterministic rules, independently of the LLM. UI copy was audited to ensure AI-generated fit scores were presented as estimates.

5. Sponsor-Provided Resources

Declare any official SDC sponsor-provided GenAI API, cloud credits, tools, mentoring, or data that your team used.

Did your project use any official SDC sponsor-provided resource?

☑ Yes ☐ No

If yes, list them below:

Sponsor	**Resource (API / credits / platform / data)**	**How It Was Used in the Project**
Runpod	GPU Credits/Platform	Hosted our backend serverless AI endpoint (Qwen2.5-7B-Instruct) specifically to parse extracted résumé text during the CV import process.
Replit	Replit Core Promo Code	Primary development environment for coding, testing, and full-stack deployment.

Was the sponsor resource essential to the core functionality of the prototype, or could it be replaced? Explain briefly:

[Maximum 100 words]

Both resources were essential for our current architecture. RunPod provided the necessary GPU compute to run a 7B parameter LLM for CV parsing without relying on rate-limited public APIs. Replit Core allowed us to use the Replit Agent to build and deploy the application in a unified workspace.

6. Security, Privacy & Responsible Use

6.1 Data Handling & Privacy

What user or personal data does your application collect, store, or send to third-party services (including AI APIs)? How is it protected, and how long is it kept? State "No user data is collected" if applicable.

[Maximum 150 words]

For CV imports, text is extracted in the browser and sent to our RunPod serverless endpoint for parsing. Because résumés inherently contain personal data, Personally Identifiable Information (PII) is temporarily transmitted to RunPod, RunPod's specific data retention terms for this endpoint remain unverified. Profile and pathway data are stored in a file-backed SQLite database on Replit. This published-app filesystem resets on restart, meaning saved user data is erased when the server restarts.

6.2 Known Limitations & Risks

Identify the main technical limitations of your AI components (e.g., hallucination, bias, rate limits, dependency on a single provider) and any mitigation you have implemented.

[Maximum 150 words]

The primary limitation is data persistence; because SQLite is file-backed on a published Replit app, data is lost upon server restarts. Additionally, transmitting résumé text to an external GPU endpoint introduces privacy risks regarding unverified provider retention policies. To handle forecasting uncertainty, career fit scores use deterministic editorial rules rather than generative AI, and are explicitly labeled as heuristic estimates rather than definitive job-market probabilities.

7. Compliance & Readiness Checklist

Tick all boxes that apply before submitting.

- ☑ All APIs, cloud services, AI tools, models, and datasets used in the project are declared in this document.
- ☑ All third-party code, datasets, and models are used in accordance with their licenses, and attribution is provided where required.
- ☑ No API keys, passwords, or other credentials are exposed in the code repository, prototype, or this document.
- ☑ Any use of generative-AI tools for development has been disclosed and reviewed by the team.
- ☑ Any use of official SDC sponsor resources has been declared in Section 5.
- ☑ The prototype described here is accessible to judges through the links provided in Section 1.
- ☑ All fields in this template have been completed within the word limits stated.

8. Declaration

By submitting this document, the team leader confirms that the information provided is complete and accurate to the best of the team's knowledge, and that every API, cloud service, AI tool, dataset, model, and sponsor resource used in the project has been declared.

Muhammad Haqim bin Mohd Nazry
